Application/Control Number: 09/830,223 Page 2

Art Unit: 1755

1. This Office action is in response to the amendment filed 12/10/04 and the IDS documents filed 9/15/04, 10/28/04 and 12/15/04 and refers to the Office action mailed 9/10/04.

2. Claim 23 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

None of silicon, tellurium, or boron has the properties of a metal, namely ductility, malleability, and thermal and electronic conductivity. Citing to a laymen's dictionary for support for the proposition that these elements are metals is not availing; it is not a dictionary that defines the identity of these elements, but their properties.

- 3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
- 4. Claims 4-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Yuo as cited in and for the reasons of record given in the previous Office action.
- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
  - 6. Claims 4-48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yuo.

The disclosure of Yuo has been discussed previously.

Yuo lacks disclosure of the preferred embodiments of the present claims.

Art Unit: 1755

However, use of different metals, different phenols, or different anilines in the claimed process would have been within the skill of the routineer in the art to achieve with only minor experimentation.

It would have been obvious to one of ordinary skill in the art to apply that skill to the disclosure of Yuo with a reasonable expectation of obtaining a highly-useful polymerization catalyst with the expected benefit of being able to perform the polymerization in both polar and nonpolar media.

7. Applicant's arguments filed 12/10/04 have been fully considered but they are not persuasive.

In response to applicant's argument that the prior art is drawn to a polyamide catalyst instead of to a polyester catalyst, a recitation of the intended use of the claimed invention must result in a compositional difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art composition is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 370 F.2d 576, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 312 F.2d 937, 939, 136 USPQ 458, 459 (CCPA 1963).

In response to applicant's arguments, the recitation "for polyester production" is given no patentable weight because the recitation occurs in the preamble. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a composition, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or compositional limitations are able to stand alone.

Application/Control Number: 09/830,223

Art Unit: 1755

See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to J. Pasterczyk whose telephone number is 571-272-1375. The examiner can normally be reached on M-F from 9 to 5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jerry Lorengo, can be reached at 571-272-1233. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished
